The Last Lecture Randy Pausch 2008-04-08 "We cannot change the cards we are dealt, just how we play the hand."---Randy Pausch A lot of professors give talks titled "The Last Lecture." Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull the same question: What wisdom would we impart to the world if we knew it was our last

chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he had recently been diagnosed with terminal cancer. But the lecture he gave--"Really Achieving Your Childhood Dreams"--wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because "time is all you have...and you may find one day that you have less than you think"). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture such a phenomenon and given it an indelible form. It is a book that will be shared for generations to come.

Hitler's American Gamble Brendan Simms 2021-11-16 A riveting account of the five most crucial days in twentieth-century diplomatic history: from Pearl Harbor to Hitler's declaration of war on the United States By early December 1941, war had changed much of the world beyond recognition. Nazi Germany occupied most of the European continent, while in Asia, the Second Sino-Japanese War had turned China into a battleground. But these conflicts were not yet inextricably linked--and the United States remained at peace. *Hitler's American Gamble* recounts the five days that upended everything: December 7 to 11. Tracing developments in real time and backed by deep archival research, historians Brendan Simms and Charlie Laderman show how Hitler's intervention was not the inexplicable decision of a man so bloodthirsty that he forgot all strategy, but a calculated risk that can only be understood in a truly global context. This book reveals how December 11, not Pearl Harbor, was the real watershed that created a world war and

transformed international history.

The Story So Far Bill Grueskin 2011-06-01 Bill Grueskin, Ava Seave, and Lucas Graves spent close to a year tracking the reporting of on-site news organizations some of which were founded over a century ago and others established only in the past year or two and found in their traffic and audience engagement patterns, allocation of resources, and revenue streams ways to increase the profits of digital journalism. In chapters covering a range of concerns, from advertising models and alternative platforms to the success of paywalls, the benefits and drawbacks to aggregation, and the character of emerging news platforms, this volume identifies which digital media strategies make money, which do not, and which new approaches look promising. The most comprehensive analysis to date of digital journalism's financial outlook, this text confronts business challenges both old and new, large and small, suggesting news organizations embrace the unique opportunities of the internet rather than adapt web offerings to legacy business models. The authors ultimately argue that news organizations and their audiences must learn to accept digital platforms and their constant transformation, which demand faster and more consistent innovation and investment.

Making Numbers Count Chip Heath 2022-01-11 A clear, practical, first-of-its-kind guide to communicating and understanding numbers and data—from bestselling business author Chip Heath. How much bigger is a billion than a million? Well, a million seconds is twelve days. A billion seconds is...thirty-two years. Understanding numbers is essential—but humans aren't built to understand them. Until very recently, most languages had no words for numbers greater than five—anything from six to infinity was known as "lots." While the numbers in our world have gotten increasingly complex, our brains are stuck in the past. How can we translate millions and billions and milliseconds and nanometers into things we can comprehend and use? Author Chip Heath has excelled at teaching others about making ideas stick and here, in *Making Numbers Count*, he outlines specific principles that reveal how to translate a number into our brain's language. This book is filled with examples of extreme number makeovers, vivid before-and-after examples that take a dry number and present it in a way that people click in and say "Wow, now I get it!" You will learn principles such as: -SIMPLE

PERSPECTIVE CUES: researchers at Microsoft found that adding one simple comparison sentence doubled how accurately users estimated statistics like population and area of countries. -VIVIDNESS: get perspective on the size of a nucleus by imagining a bee in a cathedral, or a pea in a racetrack, which are easier to envision than "1/100,000th of the size of an atom." -CONVERT TO A PROCESS: capitalize on our intuitive sense of time (5 gigabytes of music storage turns into "2 months of commutes, without repeating a song"). -EMOTIONAL MEASURING STICKS: frame the number in a way that people already care about ("that medical protocol would save twice as many women as curing breast cancer"). Whether you're interested in global problems like climate change, running a tech firm or a farm, or just explaining how many Cokes you'd have to drink if you burned calories like a hummingbird, this book will help math-lovers and math-haters alike translate the numbers that animate our world—allowing us to bring more data, more naturally, into decisions in our schools, our workplaces, and our society.

Unnatural Selection Mara Hvistendahl 2011 "Lianyungang, a booming port city, has China's most extreme gender ratio for children under four: 163 boys for every 100 girls. These numbers don't seem terribly grim, but in ten years, the skewed sex ratio will pose a colossal challenge. By the time those children reach adulthood, their generation will have twenty-four million more men than women. The prognosis for China's neighbors is no less bleak: Asia now has 163 million females "missing" from its population. Gender imbalance reaches far beyond Asia, affecting Georgia, Eastern Europe, and cities in the U.S. where there are significant immigrant populations. The world, therefore, is becoming increasingly male, and this mismatch is likely to create profound social upheaval. Historically, eras in which there have been an excess of men have produced periods of violent conflict and instability. Mara Hvistendahl has written a stunning, impeccably-researched book that does not flinch from examining not only the consequences of the misbegotten policies of sex selection but Western complicity with them"--

Little Victories Jason Gay 2016-05-31 "The Wall Street Journal's popular columnist Jason Gay delivers a hilarious and heartfelt guide to modern living. Four times a week, millions of men and women turn to Jason Gay's column in The Wall Street Journal. Why is Gay so celebrated? It starts with his amusing, fan's-eye-view of the sports world, which he loves but doesn't take too seriously. But his most celebrated features are his "Rules" columns, which provide untraditional, highly amusing but useful advice for navigating the minefields of everyday life. In this, his first book, Gay provides witty and wise advice on the Big Questions. Such as how to behave at work: "If you are excited about the company holiday party, this is likely an early-warning signal from the lighthouse to cancel, because you may fit the profile of the person who winds up kissing four co-workers, then stands on the coach at 2:00 a.m. railing against the company healthcare plan before passing out, then waking up twenty minutes later and demanding everyone take a taxi to Atlantic City for breakfast." Gay makes the case that it is not the grand accomplishments like climbing Mt. Everest (which, as he points out, is expensive and stressful) that make life sweet but conquering the small everyday challenges, like putting pants on before 2:00 p.m. on a Saturday. Little Victories is a life guide for people who hate life guides. Whether the subject is rules for raising the perfect child without infuriating all of your friends, rules for how to be cool (related: Why do you want to be cool?) or rules of thumb to tell the difference between real depression and just eating five cupcakes in a row, Gay's essays--whimsical, practical, and occasionally poignant--will make you laugh and then think, "You know, he's kind of right."--Provided by publisher.

The End of Craving Mark Schatzker 2021-11-09 Acclaimed journalist and author of The Dorito Effect delivers a groundbreaking, entertaining, and informative work that reveals how our dysfunctional relationship with food began--and how science is leading us back to healthier living and eating. If you have ever wondered, "How do I eat what's good for me?" you are not alone. Innumerable diets have been tested and billions of dollars have been spent attempting to study and understand the simple act of consuming food. So, why aren't we getting healthier? Why does the dysfunctional relationship between eating and overeating, prevent us from living well? What if the key to unlocking a new path to nutrition and health lies not in overcoming our destructive urges, but understanding them? Now, science writer Mark Schatzker explores these key questions and the future of eating by focusing on the way our brain's powerful instinct to eat has been turned against itself. he takes us on a lively journey from the mountains of Italy to the Old South and inside brain scanning laboratories, to reveal new and fascinating information that will upend the way we see eating, craving, and body weight, including: --Our brains control body weight as effectively as it does body temperature, blood oxygen levels, and heart rate--tracking the energy we consume and burn with greater precision than even scientists can --We are not programmed to crave endless calories, but rather to crave what we need --Our ability to sense sugar and fats has been altered due to technologies like artificial sweeteners, artificial fats, synthetic starches, and flavorings --This "mismatch" between the way food tastes and the nutrients it delivers has created an unnatural and heightened desire to eat --Ultimately, by "fortifying" our food with certain vitamins, as we do with livestock, we have supercharged the caloric potential of what we eat and have unwittingly enabled obesity Blending conventional wisdom, historical research, and cutting-edge science, The End of Craving reveals a new and radical truth: our natural urges are not primitive. Nor are they harmful. Only

by restoring the relationship between the flavor of food and the nutrition it provides can we hope to change our eating habits and overall health, leading to longer and happier lives.

The Wall Street Journal Guide to Understanding Money & Investing Kenneth M. Morris 2004 Traces the history of money and discusses stocks, bonds, mutual funds, futures, and options.

Being You Anil Seth 2021-10-19 INTERNATIONAL BESTSELLER A Best Book of 2021–Bloomberg Businessweek; A Best Science Book of 2021–The Guardian; A Best Science Book of 2021–Financial Times; A Best Philosophy Book of 2021–Five Books; A Best Book of 2021–The Economist Anil Seth's quest to understand the biological basis of conscious experience is one of the most exciting contributions to twenty-first-century science. What does it mean to “be you”—that is, to have a specific, conscious experience of the world around you and yourself within it? There may be no more elusive or fascinating question. Historically, humanity has considered the nature of consciousness to be a primarily spiritual or philosophical inquiry, but scientific research is now mapping out compelling biological theories and explanations for consciousness and selfhood. Now, internationally renowned neuroscience professor, researcher, and author Anil Seth is offers a window into our consciousness in *BEING YOU: A New Science of Consciousness*. Anil Seth is both a leading expert on the neuroscience of consciousness and one of most prominent spokespeople for this relatively new field of science. His radical argument is that we do not perceive the world as it objectively is, but rather that we are prediction machines, constantly inventing our world and correcting our mistakes by the microsecond, and that we can now observe the biological mechanisms in the brain that accomplish this process of consciousness. Seth has been interviewed for documentaries aired on the BBC, Netflix, and Amazon and podcasts by Sam Harris, Russell Brand, and Chris Anderson, and his 2017 TED Talk on the topic has been viewed over 11 million times, a testament to his uncanny ability to make unimaginably complex science accessible and entertaining.

The Internet Is Not What You Think It Is Justin E. H. Smith 2022-03-22 An original deep history of the internet that tells the story of the centuries-old utopian dreams behind it—and explains why they have died today Many think of the internet as an unprecedented and overwhelmingly positive achievement of modern human

technology. But is it? In *The Internet Is Not What You Think It Is*, Justin Smith offers an original deep history of the internet, from the ancient to the modern world—uncovering its surprising origins in nature and centuries-old dreams of radically improving human life by outsourcing thinking to machines and communicating across vast distances. Yet, despite the internet’s continuing potential, Smith argues, the utopian hopes behind it have finally died today, killed by the harsh realities of social media, the global information economy, and the attention-destroying nature of networked technology. Ranging over centuries of the history and philosophy of science and technology, Smith shows how the “internet” has been with us much longer than we usually think. He draws fascinating connections between internet user experience, artificial intelligence, the invention of the printing press, communication between trees, and the origins of computing in the machine-driven looms of the silk industry. At the same time, he reveals how the internet’s organic structure and development root it in the natural world in unexpected ways that challenge efforts to draw an easy line between technology and nature. Combining the sweep of intellectual history with the incisiveness of philosophy, *The Internet Is Not What You Think It Is* cuts through our daily digital lives to give a clear-sighted picture of what the internet is, where it came from, and where it might be taking us in the coming decades.

Digital Libraries Judith Andrews 2017-05-15 *Digital Libraries: Policy, Planning and Practice* brings together a wealth of international experience in the planning and implementation of digital and hybrid library projects, providing a stimulating and informative handbook and reference for library staff and information managers. It consists of chapters contributed by leading specialists from Europe, North America, South Africa and the Middle East, who offer their insight into the decision-making processes that have shaped a variety of different digitization programmes. Beginning with introductory overviews of the digital library context, the US Digital Library Program and the UK e-lib and hybrid library programmes, *Digital Libraries* then divides into two main sections on policy and planning, and implementation and practice. The first explores concerns such as financial and resource planning, digitized compared to born-digital content and related service issues, open

access to scholarly research archives, policies for and against preservation and their justification, and evaluating electronic information services. The second section is based on case studies on major European and North American digital library projects, including the Glasgow Digital Library, UCEEL (University of Central England Electronic Library), the Networked Digital Library of Theses and Dissertations (discussed in the context of five international projects), the Indiana University music Variations and Variations2 Project, and the beginnings of the Library of Congress digital program and its integration into core library services. The concluding chapter discusses the way forward for digital libraries in the context of experiences at Tilburg University library, and possible enabling or limiting factors in the future. The result of drawing together these varied and illuminating experiences is a book that offers useful information and comparisons for all digital library project staff, institutional administrators, educators and developers of learning technology. It also provides useful pointers for researchers and project staff involved in archive and museum projects, as well as introducing students to the key ingredients of successful digital libraries.
